

Testimonial Letter:

ECOLAB (Taicang) Technology Co., LTD (abbreviated as ECOLAB Taicang hereinafter), located at Taicang, Jiangsu Province, China, is a zero effluent discharge factory. It covers a wide range of products, including disinfectants (peracetic acid, quaternary ammonium salt, sodium hypochlorite), industrial cleaning agents (acidic, caustic and surface active agent), hand lotion, floor curing wax, and laundry soap powder series.

The plant is located at Lake Tai area, where zero phosphate and ammonia discharge is strictly required. Therefore, the treated wastewater must be zero effluent discharged.

PACT Environmental Technology Co., Ltd. provided EPC service of wastewater treatment for ECOLAB Taicang. The wastewater treatment system has been put into use since September 2012. After more than one year's operation, the system performance is stable and cost-effective. The treatment achieved reduction of COD_{Cr} by 99.6%, TDS by 90%, TP by 99.8%, and TN by 90%.

We are very proud of our zero wastewater factory and would do our best to protect environment for ever.
